

## Stay Clean / RV Comfort Mat Install & users guide...

### Installing the Mat:

- 1) Choose a vertical or horizontal mounting location that the mat (in the rolled position) will fit best, by holding it up in place. Keep in mind you need a surface that short screws can go into. You can mount inside or in the under-storage compartment areas.

- 2) Hold up mat (in rolled position) to the preferred mounting location, center & straighten as you would like it to look installed; place one piece of (masking or painters tape) next to each of the 3 pre-mounted Velcro strips located on the mat itself so they are parallel with each other, see diagram. Note: You can go back to shift the tape over as needed to achieve a straight line.
- 3) Next mount the 3 mounting pads, each with 2 screws right in the place you put your masking / painter's tape. You may want to move the mounting pads over about 2" (towards the location the pad is to be mounted) to compensate & achieve a more accurate location once mounted as you had planned, when previously holding up in place.

- 4) Once the 3 mounting pads are installed hold up the mat to them and they should line up with the Velcro strips on the mat. Line the two up together & push in place to attach the mat to the mounting pads.
- 5) To remove, roll the mat in either direction to separate from the Velcro, do not pull straight out to release.

### Users Guide:

- 1) Remove mat from mounting location, pull three sections of Velcro strips apart & unroll.
- 2) You can use as the full length, or double up for more comfort
- 3) Cleaning, with a mild soap, such as a liquid dish soap & warm water. Let fully dry before rolling back up & storing.
- 4) When done, roll back up tightly and attach the three Velcro strips back up to each other towards the end. Line up & push back in place to the mounting location.
